

Subpoena Software for Public Safety and Civilian Witnesses

From real-time subpoena issuance to day-of-court officer attendance tracking, CourtNotify is a proven solution that closes gaps between the courts, attorneys, public safety and civilian witnesses.

FW | CourtNotify is web-based software used by agencies nationwide to increase court notification efficiencies, improve witness accountability and reduce court administrative time and costs.

It adds value to existing case management systems by transmitting real-time subpoenas and court-related notifications that includes receipt acknowledgments to officers and/or civilian service deputies.

Close Gaps with Public Safety Witnesses

CourtNotify can be used independently by single agencies or as a unifying software solution for multiple agencies to centralize subpoena management for the courts, prosecuting and defense attorneys, public safety and civilian witnesses. Case details can be data entered or imported from case management systems.

With CourtNotify, notifications can be transmitted in real-time to officers in multiple agencies. Officer's schedules can be viewed and those with conflicts are red-flagged.

Officers receive notifications via their CourtNotify account, agency email, or using the companion mobile app for iOS or Android devices. Acknowledgment links enable quick time/date stamped receipt verification. Escalation alerts are included to flag non-acknowledged notifications.

Decrease Service Delivery Cost for Civilians

Civilian service agencies receive subpoenas electronically and assign deliveries to service deputies. Witness's service and court history are tracked, with date/time stamped delivery logs.

Witnesses with bad addresses or alias names are flagged for improved service results. Delivery statuses are saved using bar code scanners or entered on mobile devices, with real-time results viewing by participating criminal justice practitioners.

FW | COURTNOTIFY

Highly Configurable

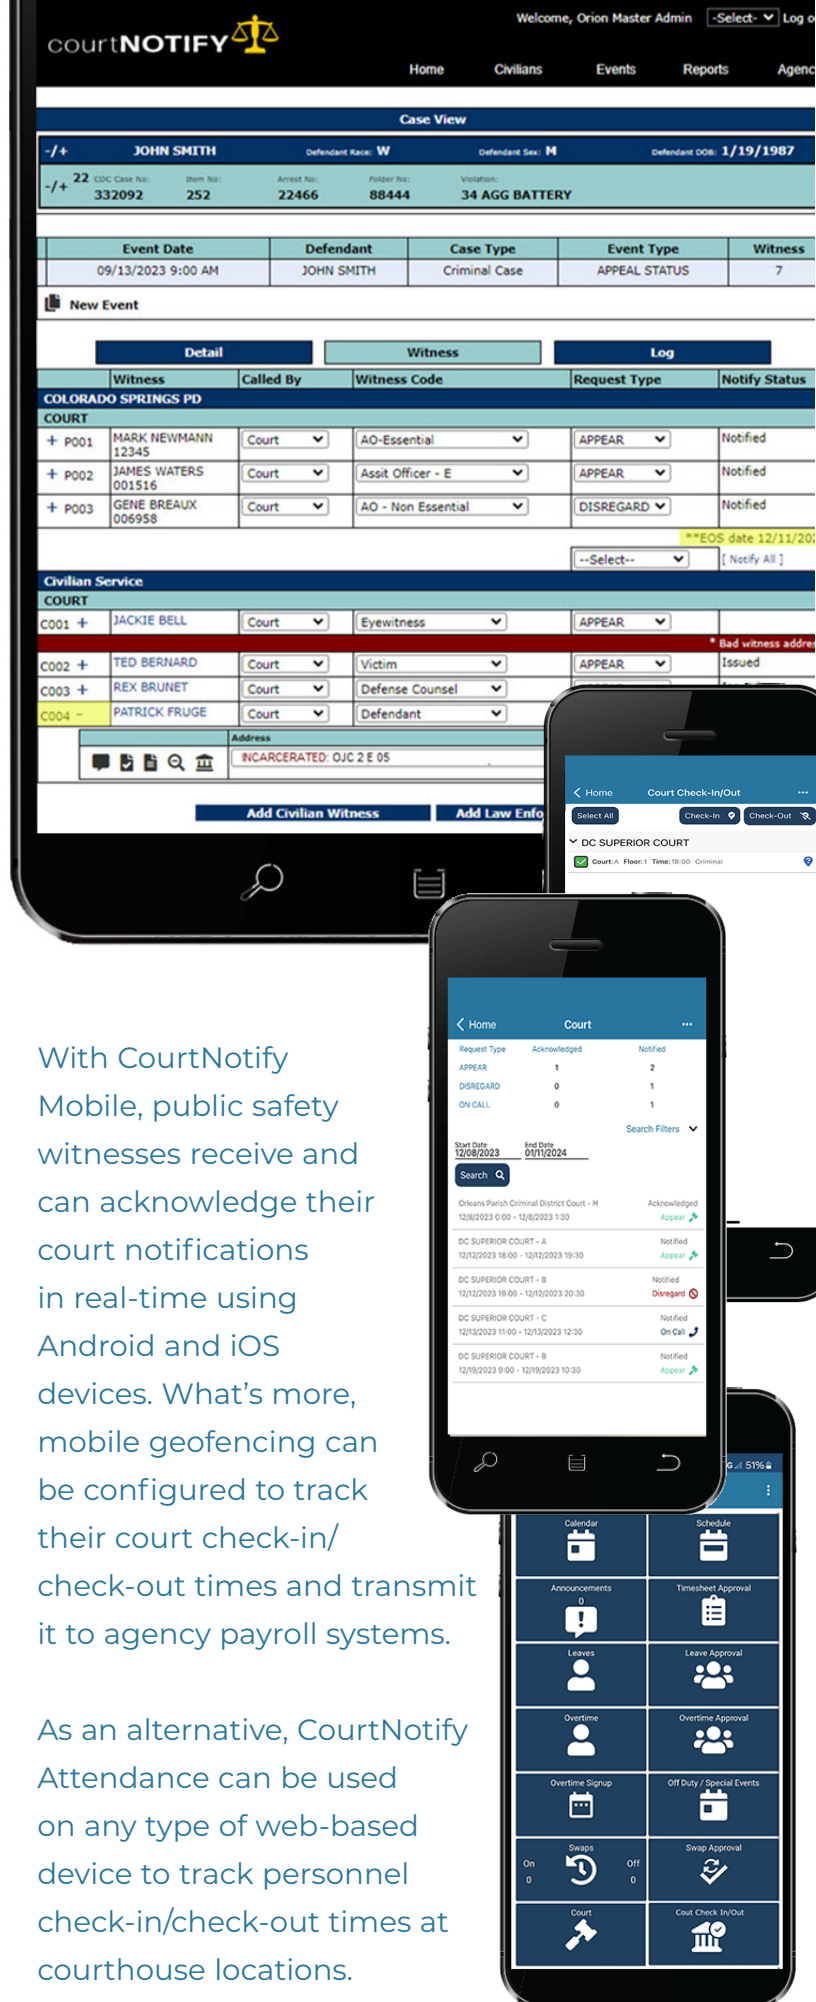

- » Configure specific court types, locations, hearing codes, field names, etc.
- » Setup notification and acknowledgment types for civilians versus public safety witnesses
- » Includes tools to coordinate officer schedules or can interface with existing scheduling systems
- » Customize document formatting including images, seals, and electronic signatures
- » Role-based security controls

Centralized Solution for All Criminal Justice Practitioners

- » Decreases court admin time and cost
- » Reduces court delays and improves case closures
- » Improves witness attendance and accountability
- » Reduces overtime cost for unnecessary public safety witness appearances
- » Saves time and civilian service cost

Data Security

- » Microsoft Azure Government Cloud infrastructure
- » The infrastructure environment features FedRAMP architecture with the highest levels of data security, system uptime, and built-in redundancy
- » CourtNotify BreachLock application certification

With CourtNotify Mobile, public safety witnesses receive and can acknowledge their court notifications in real-time using Android and iOS devices. What's more, mobile geofencing can be configured to track their court check-in/check-out times and transmit it to agency payroll systems.

As an alternative, CourtNotify Attendance can be used on any type of web-based device to track personnel check-in/check-out times at courthouse locations.
